DETAILED ACTION

Allowable Subject Matter

1. Claims 11-13, 15-18, 20-30 allowed.
2. The following is an examiner's statement of reasons for allowance: Morioto (US 4450460) does not teach (claim 11) a first spectral filter component located upstream of the spatial filter component in the receiving direction and reflecting in the infrared range for screening background radiation and for avoiding or reducing heating-up of the distance meter, (claim 17) the at least one spatial filter component includes a fiber laser having a multimodal sheath and an active fiber core, and wherein the reflected radiation is passed through the multimodal sheath with an optical cover between the fiber core, and a sensor, (claim 18) the at least one spatial filter component includes a fiber laser having a multimodal sheath and an active fiber core, and wherein the reflected radiation is passed through the active fiber core with an optical switch between the fiber core and the sensor, (claim 20) one spatial filter component includes a fiber laser having a multimodal sheath and an active fiber core, and a second spectral filter component located upstream of the first spectral filter component in the receiving direction, wherein the second spectral filter component includes a UV filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

EXAMINER'S AMENDMENT

The application has been amended as follows: the abstract should read as

ABSTRACT

Disclosed is a distance meter, particularly for telescope arrays in ground-based or space-based applications for detecting surfaces. Said distance meter comprises at least one radiation source for emitting electromagnetic radiation on to a target that is to be measured, a receiver unit with a sensor for receiving the radiation reflected by the target and deriving distance data, and a first spectral filter component. According to the invention, the angular spread of reception of the reflected radiation is limited by means of at least one spatial filter component, especially a fiber laser as a radiation source and receiver component.
